Automated External Defibrillator

## Simple and Vital

CardiAid Automated External Defibrillator (AED) is an easy-to-use device designed specially to provide life-saving electroshock treatment for a patient having sudden cardiac arrest (SCA). It is an outstanding product with its innovative technology, functional design, highest production standards and impressive price performance. CardiAid AED is equipped with features warranting both the patient's and the user's safety.

- ♥ Can be used by any person with basic life support knowledge.
- ♥ Gives opportunity of applying electroshock within 1-2 minutes.
- ♥ Automatically turns on when cover is opened.
- ♥ Diagnoses the potentially life threatening cardiac arrhythmias of ventricular fibrillation and ventricular tachycardia in a patient.
- ♥ Does not deliver shock if shock is not required.
- ♥ Clear verbal and visual instructions prepared according to ILCOR 2005 Resuscitation Guideline.
- ♥ Provides the most efficient electroshock with biphasic waveform.
- ♥ Assists the user through CPR with metronomic signals for maximum efficiency.
- ♥ Automatic self-test: daily, monthly and when the device is switched on.
- ♥ Pre-connected electrodes
- ♥ Movement detection
- ♥ Automatic event documentation
- ♥ Special accessories providing safety, easy use and best performance

The CardiAid is the most user-friendly defibrillator available!
